Description

This ToolkitRC ADP180 is a powerful AC Adapter with a 19.5V 9.3A XT60 Output, made for RC gear & other high-power applications requiring a beefy PSU.	
As any RC Enthusiast will know, RC gear typically requires a lot of Power, especially when pushing various components to the limits of their capabilities. However, while we would all love to just keep going, without ever having to recharge or care for our Batteries, this is unfortunately just not possible – unless you are lucky enough to own solar panels and other gadgets to boost flight, voyage or travel times – and this is why we are somewhat obsessed with having the right gear to keep our batteries charged up, healthy, and ready to deliver the power we need for our addictive hobbies.	
This ToolkitRC ADP180 is a powerful AC Adapter offering 19.5V 9.3A output in a classic power brick style, featuring a high-power XT60 Output for heavy-duty applications like multicoil Battery Charging, on-the-fly sampling and testing, as well as any other use case that needs up to 180W of reliable, low-noise power. Of course, it makes sense that since this adapter is created by the masters of RC gear, ToolkitRC, it is perfectly compatible with all of their gear, including the ToolkitRC MRS Multitool Charger, the little brother ToolkitRC MS Multitool Charger, as well as the ToolkitRC WM150 Watt Meter and Testing Tool.	
Manufacturer	- ToolkitRC
Input Voltage	- 100V to 240V AC 50/60Hz
Input Current	- 2.34A Max
Output Voltage	- 19.5V DC
Output Current	- 9.3A Max
Output Power	- 180W Max
Input Plug	- IEC 60320 C14 / C15 Universal Connector
Output Plug	- XT60 High Power Connector
Suggested Tools/Chargers	- ToolkitRC MRS - ToolkitRC MS - ToolkitRC WM150
Safe Operating Temperature	- 10° to +50°C
Weight	- 180g

Dimensions
- 165 x 77 x 32mm
