Description

- Alclad Metallic Lacquers are designed to be used on surfaces previously primed using any one of the Alclad Surface Primers.
- Unparalleled metallic finishes are simple to achieve using the instructions provided on the bottle labels.
- To achieve a 'non-reflective' finish, we recommend using Alclad Metallic Lacquers over Grey, White and/or Black Primer and Microfines.
- To achieve a 'reflective' finish, we recommend using Alclad Metallic Lacquers over Gloss Black Base.
- To retain the high gloss shine of the Alclad Metallic Lacquer when applying decals and weathering, we recommend using Alclad Aqua Gloss Acrylic Varnish, particularly when working with solvent based weathering products.
- When sprayed at the recommended pressure, this varnish will not reduce the shine of the metallic finish and will provide a durable and robust surface for decal application and weathering.
- When working with water-based weathering products we recommend using the range of Alclad Klear Kote Varnishes. Klear Kote comes in a wide variety of finishes: Gloss, Semi-Gloss, Light-Sheen, Flat and Matte.
- All of the Alclad Varnish range can be used in conjunction with any brand and type of modelling paint, including the Alclad Mil Spec range of airbrush ready, quick-drying enamels as well as other manufacturers acrylics and lacquers.
