Description

Is grade product:

Is made for: T-REX 500 series

The 425 3K carbon fiber main blades are designed specifically for extreme 3D flying, featuring both high agility and excellent stability characteristics. The blades have brand new airfoil design, coupled with new painted graphics. In addition, the blades' rigidity have been increased for better anti-torsion characteristics during flight. The new airfoil design effectively minimizes turbulence at the blade tips, reducing blade noise and power loss.

Shape: Symmetrical airfoil

Length: 425x425.6mm

Thickness: 10mm

Shaft Diameter: 3mm

Weight: Approx 120g/set
