Description

The Huina 15-Channel 2.4G Excavator is a 1/14 scale model of a real excavator that works just like the real thing. The bucket, cab and wheel hubs are all made of hard metal alloy for durability, while the rubber tread resists slip and wear, making it possible to climb effortlessly.

The 2.4GHz Transmitter allows for 15 separate functions, allowing control of all of the model's parts including 360° cab rotation. 2.4GHz technology allows for multiple models to run at the same time without interference. The transmitter can also be programmed to allow you to perform a series of movements with just one button. The die-cast alloy cab also features lights and music for the ultimate in scale realism.

FEATURES:

15-Channel transmitter with 15 different keys and functions

2.4GHz radio system enables you to control the vehicle up to 100m
