Description

The Mr Hobby PS-771 Custom (0.18mm) Airbrush is the flagship model in the range. It is an ultra-high precision airbrush ideal for close-in spraying of fine detail or for use with inks, washes and other highly fluid paints. They have tuned the airbrush thoroughly to allow more delicate airbrushing even when being used with a low pressure linear compressor, making it possible to airbrush the colors precisely and ideal for advanced users.

The PS-771 is a gravity-fed double-action airbrush with a 0.18mm nozzle and a 10cc cup. At the front of the body is a micro air control (MAC) valve to enable precise adjustment of airflow, and the trigger is Mr Hobby's Semi-Easy Soft button to enable you to initiate spraying smoothly. It comes with a 1/8 BSP air intake compatible with Iwata and similar air hoses. The nozzle cap fitted is the crown cap type, to enable detail work, and the airbrush has a needle stopper to enable you to set a fixed paint flow.

The airbrush is supplied in a hard protective case which also contains: a Badger-type vinyl air hose with 0.5mm female connectors at each end, a 0.5mm adapter to convert the 1/8 BSP air intake to fit the Badger-type air hose if you wish, and a nozzle wrench.
