Onboard, on-aircraft, main-router, and base-station programming.

256MB on-board memory.

Model templates available for 800+ aircraft.

OVERVIEW:

For advanced-level pilots who fly high-performance aircraft, the Spektrum™ NX20 20-channel DSMX transmitter provides the latest in innovative radio control. The NX20 includes an accessible array of exclusive technologies and advanced connectivity features that are seldom found in comparable 20-channel transmitters.

Out of the box, the NX20 is compatible with Smart Technology. It's ready to support your Spektrum™ Smart batteries and Smart Ardu™ ESCs, so you can reserve important telemetry data right on your fingertips in real time. Exclusive Spektrum Airware™ software is also included to provide the easiest, most intuitive programming available.

The NX20 transmitter's Wi-Fi connectivity adds more convenience. In addition to completing product registration straight from the transmitter, you'll be able to download firmware updates instantly. It's a totally modern user experience with some of the same features and capabilities found in the top-of-the-line Spektrum™ V Series transmitters.

More proven Spektrum™ transmitter expertise can be found in the NX20 transmitter's ergonomic design. The contours, balance, and control positions combine to increase the accuracy of your inputs and provide unparalleled comfort. An easy-to-use roller wheel interface simplifies programming, with a 5.7 color display to make menus easy to read. Even a rechargeable 1S 10500mAh Li-ion transmitter battery and magnetic USB Cable and USB-C Adapter for convenient USB charging are included.

From its battery-designed display to the Wi-Fi connectivity plus built-in Smart Technology support and exclusive upgrades, the NX20 gives experienced pilots access to a wide array of Spektrum™ exclusive advantages and innovations. Fly your aircraft with next-level control — choose the 20-channel NX20 transmitter.
