Description

This 1/12 scale assembly model kit recreates Kawasaki's hyper-powerful Ninja H2R bike, a track-only monster that the famed Japanese manufacturer announced in 2015. The Ninja H2R was developed with input from many of the companies in the larger Kawasaki Heavy Industry group, and its name is a composite of two legendary Kawasaki bikes: the famed Ninja and the H2R. The Ninja H2R not only looks the part with a combination of bare carbon fiber and exquisite mirrored finish black chrome parts, it also has mind-blowing specs. It generates a hair-raising 300hp-plus from its supercharged 998cc inline-4, which it translates into other-worldly acceleration. It is also chock-full of up-to-date electronics for the track: traction control, engine brake control and more.

Scale: 1/12

Construction type: Assembly kit

Photo-etch parts: Not included

Decals included

Special feature 1: Length: 172mm, width: 70mm, height: 97mm.

Special feature 2: Detailed inline-4 engine and supercharger depictions.

Special feature 3: Engine, swing arm, front fork, plus upper, side and seat covers are attached to frame by minute screws.

Special feature 4: Features synthetic rubber depictions of front/rear slick tires, plus a separate racing stand part.

Special feature 5: Metal-plated parts are used to recreate the exhaust, muffler, and tail light case.

Special feature 6: Comes with decals, plus metal transfers to recreate the Kawasaki River mark and name logos.
