Description

The currently available Tamiya Putty (Basic Type) has long been praised by modellers for its high quality and ease of use. However, it's gray color sometimes made painting over it with a lighter color difficult. Tamiya now provides modellers with a white-colored putty to solve this problem. Useful for filling holes and seam lines, this versatile putty can be used on plastic, wood, or metal, and can also be diluted with lacquer thinner for a wide range of applications. Each aluminum tube contains 32 grams of putty.
