### Description

#### NEW

Four-rotor four-way aileronless helicopter

Advanced engineering composite material

Dimensions (MM): The rotor diameter is 220mm, the fuselage length is 265mm, and the height is 72mm

Weight (g): 185g (without battery)

Net/gross weight (kg): 9.82kg/11.2kg

Flight time: about 6 minutes

Charging time: about 120 minutes

Remote control mode: 2.4G remote control

Remote control distance (m): 60-100m

Number of drive motors: main motor (brushless) 110E 11200KV tail motor (hollow cup) 72H

Battery details: 3.7V 800mAh 20C

#### FUNCTIONS

External remote control, left and right hand switch at will, aircraft, remote control low voltage prompt and other functions

The scale of the UH-60 Black Hawk real machine is reduced, with a fine appearance and four highly simulated aileronless blades

The blade is designed according to the aerodynamic principle to provide strong power and self-stability of the machine body

The 6-axis gyroscope is used in PD mode, which makes the flight stable, especially suitable for novices

Equipped with a dedicated USB charger, more effectively protects the battery from overcharging

The remote control adopts an independent locator filling seat, which makes it feel better and more delicate, and the centering is more accurate, making the customer operate more accurately and comfortably

Use high-efficiency 2S digital steering gear, which has fast response, high precision, and precise centering, so that the aircraft has a good flight feel and a longer service life

Simple 4-rotor design, using 6-axis gyroscope, more stable flight with air pressure height adjustment function; Remote control one-button takeoff, one-button landing, ascent and descent, forward and backward, left and right steering, left and right high and other functions; Make the product easier to control and more suitable for novices to use

The use of external 110E brushless motor is more powerful, with 3.8V 800mAh 20C high-rate high-voltage battery as standard, and the flight time is about 6 minutes

The aircraft has added signal loss and crash avoidance functions; if the indoor or outdoor remote control signal distance is abnormal and uncontrollable, the aircraft will maintain its current altitude for 2 seconds, and then slowly land; Controllable range of the remote control; Reset the remote control in time before the aircraft lands, and then push and pull the throttle stick up and down to connect the aircraft and continue control

#### INCLUDED

Helicopter x 1

Remote control x 1

Manual x 1

Extra Main Blades x 4

Extra Tail Blade x 1

Extra Main Gear x 1

ES Lipo Battery x 1

USB Charger x 1

Screwdriver x 1

Hex Wrench x 1

Landing Pad x 1
