Description

HISTORY OF THE SHIP CALLED BOTTER: DUTCH FISHING BOAT MODEL:

Discover the fishing boat Botter, wooden model of this traditional Dutch ship. These boats sailed for centuries on the shallow coastal waters of the Zuyderzee Sea. The crew, usually between 2 and 4 men, used to keep the catches alive in a nursery located in the center of the ship. The Zuyderzee was a large inland sea to the north of the Netherlands.

The completion in 1934 of a large dam divided a river too, creating a large inland saltwater lake called IJsselmeer and adding the rest of the old inland sea to the Frisian Sea.

After this division no new Botten were built, and the wood and the sails were replaced by steel and motor propulsion. An association for Botter preservation keeps several of them in their original state.

CONTENTS OF THE BOTTER MODELING KIT:

Build your Botter scale model 1/35, a traditional fishing boat from the island of Marken. Its construction by means of false keel and frames approaches the assembly of the model to the construction of the real ship.

The modeling kit contains high precision laser-cut board parts, fine woods, brass, cast iron and fabric. For assembly you can follow our full colour guide step-by-step in four languages on DVD, accompanied by the plan of the model. The kit does not include printed instructions.
